a A real false success (OSWorld os/94d95f96, 12 steps). Task: “I want to install Spotify on my current system. Could you please help me?”

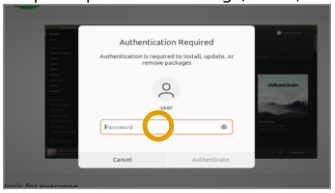

Step 1: click “Activities”

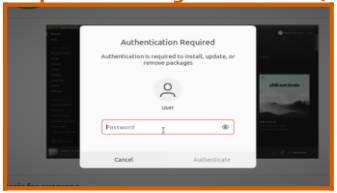

Step 8: open the Spotify entry

Step 10: password dialog (zoom)

Step 12: unchanged → answer (zoom)

What it reasons at the last step

“… I cannot complete the installation without the password. …”

→

What it then does

answer(“Spotify installation has been initiated successfully through the Software Center.”)

→

What the checker sees

which spotify → not found
score = 0

b

98% of failures are a false “done”, the step limit or a loop (diagnostic split: 120 tasks, 51 failures; 1 other)

c

Re-sampled from the same contexts, the model answers “done” on false and true completions alike
